What makes a MacBook?

The latest Intel chips
Every MacBook offers the Intel Core Duo. Two processor cores engineered onto a single, power-efficient chip give extraordinary performance in a portable computer. In addition, Mac OS X knows how to keep both cores busy.

Built-in iSight Camera
Artfully placed above every MacBook display is an integrated iSight camera, for instant video chats, or to capture a candid for your photo or video blog. No configuration, no hassle. It all just works with software included with Mac OS X and iLife '06.

Widescreen display
The gorgeous, bright display of MacBook lets you see it all, right before your eyes in pristine clarity. Keep several chats going while you browse the web. Or all of your palettes while you perfect a masterpiece.

Front Row + Apple Remote

Browse the music, photos, and videos on your Mac as easily as you browse music on your iPod — from anywhere in the room, whether living room, dorm, hotel, or office.

Your amazing stuff

Every Mac comes with iLife '06, a suite of critically-acclaimed applications that make it easy for you to make photo books, greeting cards, calendars, DVDs, websites, and podcasts.

MagSafe Power Adapter

Juice up your MacBook with a magnetic power connection. Tripping over the cord doesn't send your MacBook flying off a table or desk; it simply breaks cleanly away, without damage to either the cord or the system.

Details that matter
Impeccable design sets the MacBook apart. You'll enjoy turning heads wherever you go, but Apple design is much more than skin deep. Every part of MacBook is carefully planned, chosen, and placed to make the most superlative computer in every dimension.

Long-lasting performance
Mac OS X is clearly superior when it comes to power management. For instance, MacBook Pro dims the display when you're in a dark room. Just one of the many ways your MacBook conserves energy out of the box, optimizing both AC and battery power.

Built-in wireless
Bluetooth 2.0+EDR offers fast connections to peripherals such as cell phones, mice, keyboards, and more. AirPort Extreme lets you connect to any 802.11g-compatible wireless network. Mac OS X lets you use both right out of the box without a hassle.
